Virginia Commonwealth University, Richmond, Virginia

Sep 2019

RamHacks CarMax Challenge Winner

Developed an efficient and effective method to quickly change status of 'sold' to available for sale to accurately reflect car inventory.

Worked with a team of four using a business approach to support our technical solution using a LED lighting system

Built a prototype utilizing raspberry-pi, python, API and Beeceptor; tested the prototype and made adjustments to increase speed its speed by 5 seconds

Submitted challenge materials within 24 hours and as the winning team presented solution to CarMax management

Portfolio Site, amsuwarner.com

Developed a portfolio website utilizing HTML/CSS & JavaScript showcasing my mission as well as my projects.

Ensured that the website is mobile-friendly for all mobile devices.

Utilized Formspre which allows users to submit message within the contact form on the website.

Your Colour, yourcolour.com

Developed a website that allows users to generate and save their own unique color palettes utilizing HTML/CSS & JavaScript.

Utilized a library named chroma.js for generating random colors.

Utilized font awesome for LinkedIn and GitHub icons.

ORGANIZATIONS

Norfolk State University, Norfolk, Virginia
